

What is a Magnawave PEMF?

How does it work?

Pulsed Electro Magnetic Frequency, or PEMF sends out a magnetic pulse, causing your muscle and tissues to “contract”.

This pulsation creates a healing effect, allowing your cells to be more permeable, and flush waste out of the cells and muscles, as well as bring in more blood.

What does it do?

Helps reduce inflammation
Heals injured muscles, joint and ligaments
Improves circulation
Eliminates pain

Are there any side effects?

NASA case studies have found the PEMF to be effective for treating new and old injuries. The treatment is all natural, non-invasive, and does not create any side effects. **CONTRAINDICATIONS: Pace Makers - ALL BIOELECTRIC DEVICES**

Doctors are using this device world-wide to treat:

- New and chronic injuries
- Sports Injuries (workout strains and sprains)
- Jaw Pain
- Nerve Pain
- Knees - Shoulders - Ankles and Wrists

How much does it cost?

If your insurance doesn't pay for the procedure (we can check if you are not sure), the fee is \$10 for 10 minutes, and \$1.00 per minute after that.

Do you have more information on it?

Yes! We have a print out up front for you (just ask for it on your way out), or you can do a web search using these keywords:
